JUN CHUN

Interior Architect/Technical Coordinator

Jun's design expertise and proficiency with architectural detailing combine effortlessly with his skills as a construction manager. He sets a high standard for quality at every stage of a project, from proposal and pricing through design and execution.

Mediating between architectural and decorative details, Jun produces an integrated, seamless product, and is skilled at encouraging a high level of workmanship from the contractors, millworkers, and other trades with whom he works during the construction process.

As our AutoCad manager and technical coordinator, Jun works closely with each designer to develop a meticulous, detailed set of construction documents. His computer abilities are utilized in all aspects of his work, from developing graphic presentation packages, to producing drawings for fabrication, to installing and maintaining the firm's computer software. Accomplished at hand drawing, Jun also provides accurate and beautifully rendered perspective drawings for GDS's design presentations.
